Features & Advantages

Feature	Details	formsflow.ai Advantage
Standard Form Builder	Drag and drop form components with scripting options, conditional logic, API calls, field validation, and RPA integration.	Powerful yet nuanced front-end functionalities, unlike most conventional form builders.
BPMN/DMN Workflows	Enables easy collaboration between process automation specialists and developers, using a Camunda-based workflow engine.	Most form builders have workflows that are not scalable. Lack of standard notations limits scalability and cross-team collaboration.
Advanced Analytics	Comes packed with form submission and data visualisation dashboards. Sentiment analysis and natural language recognition ready.	Removes the need for a separate analytics solution. Moving data to a different analytics platform makes it cumbersome for business teams and data governance.
Unlimited Users	formsflow.ai pricing is usage and feature-based, with no caps on seat count whatsoever.	Most form-led automation alternatives have user-based pricing. When your business scales, your IT costs skyrocket.
Form Bundling	Bundle associated forms to streamline complex workflows, for example, a multi-step enrollment approval process.	Manage related groups of forms with unique workflows vs trying to manage multiple related forms separately.
Simplified Workflow Builder	If your use case does not follow BPMN notations, a simplified workflow builder allows you to build workflows intuitively.	Offering standard and intuitive, drag-and-drop workflow builders makes the platform flexible for multiple user personas.
Flow-E AI Assisted Form Builder	Build out forms in minutes with simple prompts and refine them in the low code form designer.	Conventional options do not seamlessly interlace AI and low code. formsflow.ai adds intelligence to simplicity.
Product Support	Premium versions come with dedicated product support. Contact us to find out how we can help.	Get software vendor support from the product team to build your POC or more, based on the product package.
Native Integrations Pro	Integrate formsflow.ai natively to various cloud apps for workflow automation.	Best-in-class iPaaS module with more native integrations than the alternatives. We are also bias-free. Most providers prioritize applications from their suite. We want you to pick the best app for each flow.

Add-on Definitions

Add-on	Details	formsflow.ai Advantage
Additional Tenants	Enables organizations to efficiently manage multiple independent tenants in a single environment.	Add tenants to your implementation to segregate groups or departments to their own forms and workflows.
Mobile App / Offline	A fully-featured form submission & task management app framework built for Android and iOS.	Although formsflow.ai forms are responsive, the app allows your team to operate from mobile devices and in use cases where the users could go offline.
Custom Training	Our training specialists will deliver bespoke training sessions to meet the unique needs of your team. We have pre-packaged week-long modules to address most common training needs.	Our expert team of training specialists offers custom programs, ensuring a flexible and comprehensive approach to meet your organization's learning objectives.
Solution Consulting	Our experienced solutions consultants will work with you, handling everything from form and workflow creation, to custom development for production or POC.	We have experience delivering high-impact and secure projects for Governments, software vendors and mid-large enterprises.
